

Dairy Producer Best Practices During H5N1 Bird Flu in Livestock: Mortality Management

Effective while California has Active H5N1 Bird Flu Cases in Dairy Herds

Best Practices Recommendations:

- The mortality pick-up site should be located at an area where dead animal haulers do not enter the premises or cross the path of other vehicles entering the dairy, especially those going near cattle areas.
- Dead stock is collected and stored in a manner that prevents the attraction of wildlife, rodents, and other scavengers.
- If pick-up is delayed for more than 24 hours, use temporary barriers like straw and a tarp to minimize scavenging.
- If pick-up is delayed more than 48 hours, please notify CDFA by calling 916-900-5261 or emailing Rendering@cdfa.ca.gov.
- If the hauler's vehicle must enter the dairy:
 - The vehicles are cleaned and disinfected prior to entering and exiting the dairy.
 - The hauler avoids driving near cattle areas.
 - The hauler observes and follows all biosecurity practices implemented by the dairy.
- Dairy premises personnel shall avoid direct physical contact with the dead animal haulers.
